

# M2M Solutions

## Experience Control™ Any Asset. Any Sensor. Anywhere

New Boundary Technologies provides wireless Machine-to-Machine (M2M) web applications to monitor and control any fixed or mobile assets. Monitor the location and status of storage tanks, medical equipment, vending machines, vehicles, and more.

### BENEFITS OF CONTROL

Our M2M Solutions offer:

- **Around-the-Clock Monitoring**  
Continuously monitor your remote assets and receive the information you need to manage and control your operations. Receive real-time status updates on volume, level, temperature, humidity, pressure, on/off status or any condition you need to measure.
- **Cost-Efficiency**  
Our browser-based software is a low-cost monthly service that saves you time and money by improving your efficiency. Eliminate the need for physical site visits to check asset conditions. Streamline the logistics of collecting and communicating critical information.
- **Unlimited Scalability**  
There is no limit to the number of assets you can monitor. We grow right along with your operations.
- **Data Security and Reliability**  
Our solutions use proven, industry standard, end-to-end encryption and authentication technologies to ensure the highest level of data security. Your information is always safe, secure, and confidential.
- **Any Time, Any Place Administration**  
Check the status of your assets from any device with an Internet connection.

*"M2M's resurgence is attributed to the widespread availability of wireless technologies, which make it possible to reach equipment in locations that were too remote or too costly to reach before."*

—Peggy Albright,  
The M2M Resurgence  
The M2M Opportunity  
June 2010

### DELIVERING CONTROL

- **Interactive Interface**  
User-friendly interface lets you view and provision all your assets, define and adjust your measurement alert thresholds, and view your asset locations on a map, all from one dashboard.
- **Advanced Reporting**  
Our software maintains a historical record of asset conditions. You always have the information you need to maximize efficiency, optimize operations, and ensure regulatory compliance.
- **Fast Time-to-Benefit**  
With our solutions, there is no software to install and maintain, and no need to develop a custom application. Simply subscribe to our service and provision it with information about your assets.
- **Fleet Management**  
Integration with FleetVista™ offers efficient planning and vehicle routing for service and inventory management from a single dashboard.

## M2M SOLUTIONS EXPERIENCE CONTROL

- **iDigi™ Integration**— Our service integrates with Digi's iDigi™ Platform to provide complete end-to-end remote monitoring and control solutions for any sensor on any wired or wireless network.
- **Private-Label Solutions**— Offer a remote monitoring service as an added benefit to your customers. We offer private-label solutions for sensor and equipment manufacturers and systems integrators.
- **Automatic Alerts**— Email and cell phone alerts can be automatically sent when your assets' levels or conditions reach your defined thresholds.
- **Seamless Integration**— Compatible with any sensor and any network connection, our solutions are designed to fit your needs. Simple integration with your current management software (CRM, ERP, etc.) sets our solutions apart.
